

Task 3 - Research Questions

1. Has the average temperature increased?
2. Have extreme weather events increased?
3. Which regions changed the most?
4. Has rainfall variability changed?
5. Can historical data support future planning?
6. Does higher CO2 emissions correlate with rising temperatures over time?
7. Has sea-level rise accelerated over the years?
8. Is there a relationship between average temperature and sea-level rise?
9. Which countries are the highest and lowest contributors to CO2 emissions over the years?
10. Can CO2 emissions, rainfall, and temperature together predict sea-level rise?
